Project Initialization and Planning Phase

Define Problem Statements • CrimeVision AI • Individual project

Date	29 October 2026	**Team ID**	Not applicable — solo project
Project Name	CrimeVision AI – Intelligent Multimodal Forensic Analysis Platform	**Maximum Marks**	3 Marks

Define Problem Statements (Customer Problem Statement Template)

The statements below describe the needs and challenges of potential users of CrimeVision AI from their point of view. They frame the problem before prescribing a technical solution, following the template: **I am (customer) → I'm trying to → But → Because → Which makes me feel.**

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A forensic investigator reviewing digital or multimedia evidence.	Organize and examine relevant evidence from different media types in one workflow.	Evidence may be spread across separate files and tools, making cross-referencing slow.	Manual review can be time-consuming, and important contextual links may be difficult to spot.	Concerned about missing a relevant lead or spending too much time on repetitive review.
PS-2	An investigator handling a large collection of images, video, or related case material.	Find potentially relevant items and understand why they may matter to a case.	The volume of material can make it difficult to prioritize what to inspect first.	Review time and attention are limited, and automated outputs may not explain their basis clearly.	Overloaded and cautious about overlooking useful evidence or trusting an unclear result.
PS-3	A case reviewer or authorized analyst who needs to communicate findings to others.	Produce a clear, traceable summary of the material reviewed and the observations made.	Technical findings can be difficult for non-specialists to interpret, and source context can be lost.	Decisions require understandable reasoning, references to original evidence, and careful handling of uncertainty.	Frustrated by unclear reporting and concerned that a finding could be misunderstood.

Problem focus for the project

Core problem: Investigators may need to review substantial amounts of multimedia evidence across fragmented tools, while preserving context and communicating observations clearly. CrimeVision AI is intended to support organization, review, and explainable summarization of evidence. It should assist human analysis rather than independently determine guilt or replace professional forensic judgment.

Scope note: These are proposed user problem statements for the project concept, not claims validated through interviews or field research. No team ID, team member list, or SmartBridge / Skill Wallet branding is included.
