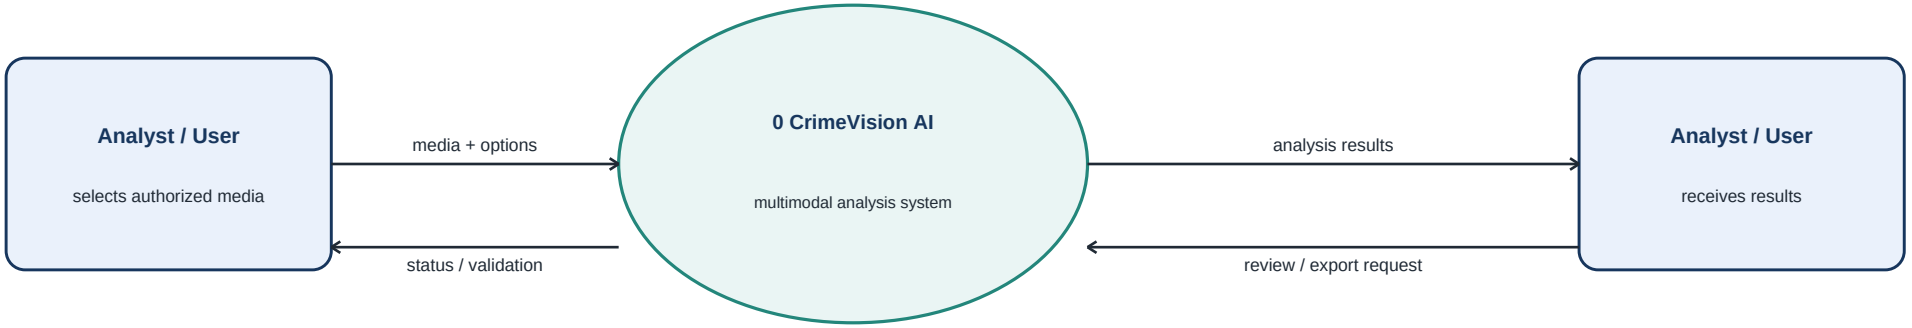
DATA FLOW DIAGRAM — LEVEL 0 (CONTEXT)

CrimeVision AI: authorized multimedia evidence review



Notation

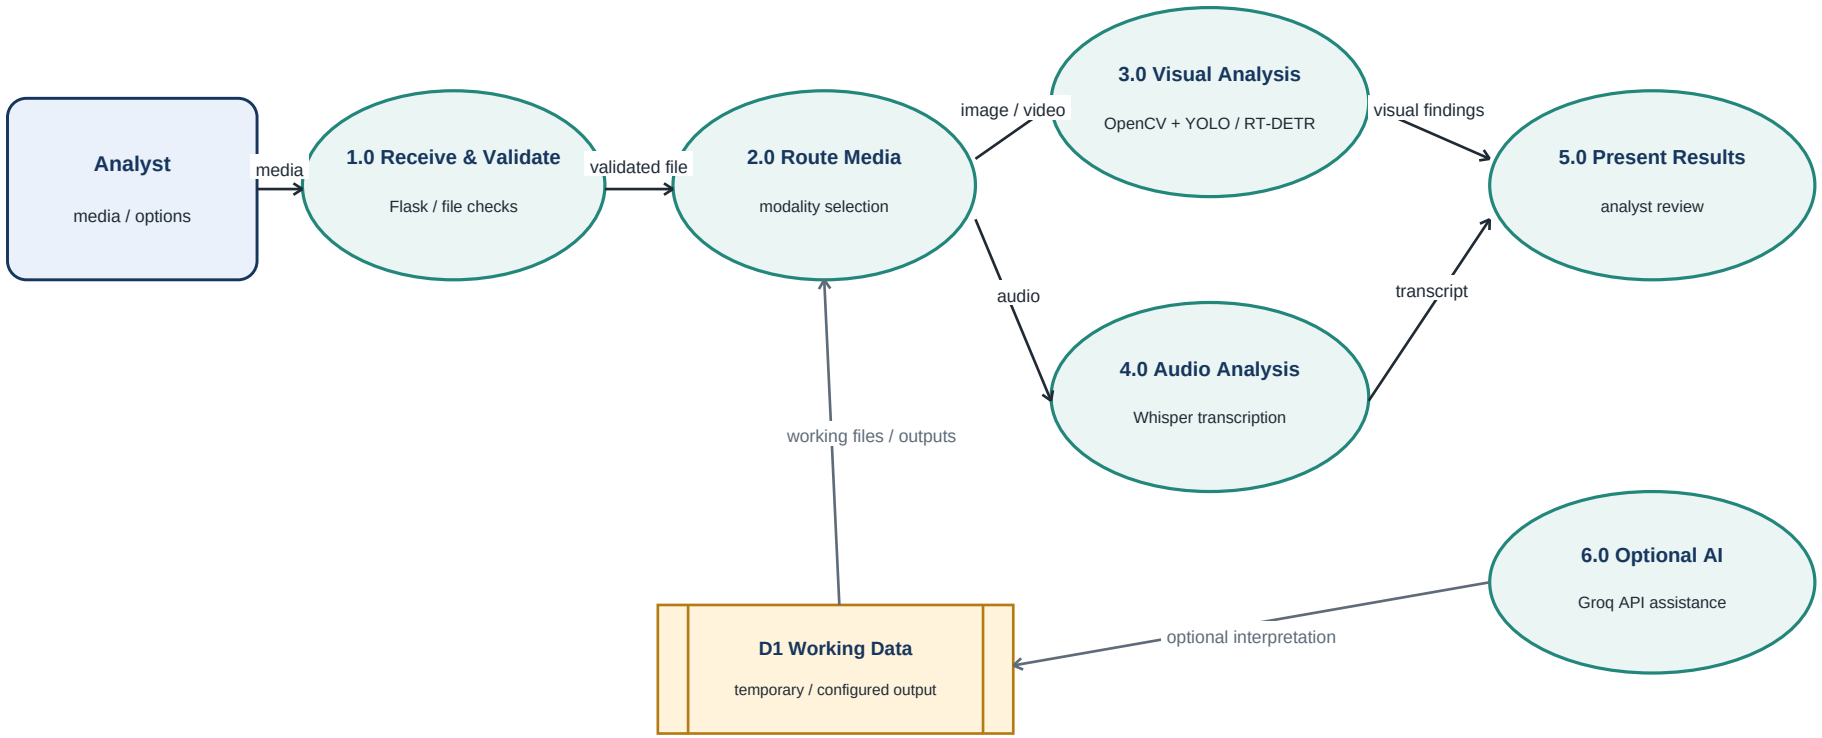
Rounded rectangle = external entity Oval = process Parallel-sided rectangle = data store Arrow = directed data flow

Context boundary: analyst-selected media enters the system; status and model-assisted results return to the analyst.

Exports and persistent storage are conceptual until confirmed in the implemented application.

DATA FLOW DIAGRAM — LEVEL 1 (PROCESS BREAKDOWN)

Logical flow based on the known prototype components; conditional features are labelled



Implementation caveat: the known environment uses CPU-only PyTorch. Persistence, export, integrated fusion, and exact UI flows need source-level confirmation.

Model outputs are candidate observations for human verification—not standalone forensic conclusions. Groq is optional and requires API configuration.
