No. of Functional Features Included in the Solution

CrimeVision — Intelligent Multimodal Forensic Analysis Platform

Date	1 November 2026
Team ID	[Enter Team ID]
Project Name	CrimeVision
Maximum Marks	5 Marks

Functional Features Overview

This document summarizes the main features of the current CrimeVision prototype. Status reflects the implementation discussed for the project; verify each feature against the final running build before submission.

S.No	Feature Name	Feature Description	Module / Component	Status	Marks Contribution
1	Case management	Create and view cases to group evidence and analysis records.	Flask case API / case store	Done	Core
2	Evidence registration	Register supported image, video, and audio uploads against a case.	Evidence API / upload utilities	Done	Core
3	Image object detection	Run a supported object-detection workflow on images and show detections.	OpenCV / Ultralytics / PyTorch	Done	Core
4	Video evidence handling	Register video files and capture basic video metadata; frame workflows are available where configured.	Video upload utilities / FFmpeg	In Progress	Core
5	Audio transcription	Use Whisper for speech transcription in the supported workflow.	Audio processing / Whisper	In Progress	Core
6	Saved analysis records	Store analysis results associated with a case and retrieve them through the API.	Case store / analysis API	Done	Core
7	Investigation view	Browse registered evidence and saved analysis records in the interface.	Frontend / Investigations UI	In Progress	Core
8	Evidence preview and download	Reopen original registered files from the investigation view.	Evidence file endpoint / frontend	In Progress	Additional

Feature Summary

Metric	Count / Value
Total features planned in this document	8
Implemented / available in the current project notes	5
Core / must-have features	7
Additional / nice-to-have features	1
Features tested and verified	Environment checks and sample image detection were verified; end-to-end status should be confirmed.

Feature Category Breakdown

S.No	Category	Features in Category	Example Features
1	User Interface (UI)	2	Case views, evidence/analysis lists
2	Backend / Logic	3	Case handling, upload validation, analysis workflow
3	Database / Storage	2	Case records, evidence files, saved analysis results
4	API / Integration	2	Flask endpoints, media-processing libraries
5	Security / Authentication	0 confirmed	Authentication/authorization is not confirmed as implemented; required for multi-user deployment.

Note: Feature status is conservative. Do not count a workflow as fully complete unless it works in the submitted build. AI results assist review and are not standalone forensic conclusions.
