Communication

CrimeVision | Intelligent Multimodal Forensic Analysis Platform

Date	1 November 2026	**Team ID**	To be filled by team
Project Name	CrimeVision	**Document status**	Project-aligned draft

Communication plan for coordinating development, testing and the project demonstration. This is a suggested working plan; update it to reflect the channels and meetings the team actually used.

Communication Plan

S.No	Type	Frequency	Channel / tool	Participants	Purpose
1	Team check-in	Daily while actively developing	Team chat or short call	Project team	Share completed work, next task and blockers.
2	Progress update	Weekly	Shared task list / document	Project team	Review milestones, test results and pending work.
3	Issue / bug discussion	As needed	Issue tracker or team chat	Developer(s) and tester	Record reproduction steps, logs, owner and resolution.
4	Supervisor/stakeholder review	At agreed milestones	Meeting or written update	Team and supervisor	Confirm scope and collect feedback.
5	Demo rehearsal	Before final demo	Local run-through / screen share	Presenter and operator	Check startup, sample files, timings and fallback plan.
6	Documentation review	Before submission	Shared folder / repository	Assigned reviewer(s)	Check README, feature statuses and deliverable consistency.

Potential Communication Challenges & Responses

S.No	Potential challenge	Recommended response
1	Different machines may have different Python/package versions.	Use requirements.txt, document a tested Python version, and share setup/checker output.
2	A feature may be described as complete before end-to-end testing.	Track status as implemented, partial or pending and record demo evidence.
3	Large media files or CPU inference may delay a live demo.	Prepare small non-sensitive samples, rehearse timings, and keep a truthful fallback recording or screenshots.

Replace the suggested tools and participants with the team's actual arrangements. The challenge entries above are preventive examples, not claims that these events definitely occurred.
