Demonstration of Proposed Features

CrimeVision | Intelligent Multimodal Forensic Analysis Platform

Date	1 November 2026	**Team ID**	To be filled by team
Project Name	CrimeVision	**Document status**	Project-aligned draft

This register is intentionally conservative. A component is marked implemented only where project context supports it; a directory or installed library alone is not proof that an end-to-end user-facing feature is complete. Recheck every status against the current application before the live demo.

Feature Status Register

S.No	Feature	Description	Status	Demo?	Remarks
1	Project environment & server entry point	Python environment, dependencies file, Flask entry point and diagnostic checker are present.	Implemented	Yes, if startup succeeds	Confirm using checker.py and run.py.
2	Image object detection	YOLO and RT-DETR weights are present; a sample YOLO detection run was previously completed.	Implemented / verify UI	Yes, via tested workflow	Do not claim all models or all image formats are covered.
3	Evidence upload/registration	API modules and evidence folders exist for image, audio and video evidence.	Partial / verify	Only if upload works	Verify file validation, storage location and UI integration.
4	Case and analysis records	Case API and case-store service modules are present.	Partial / verify	Only if persistence works	Confirm whether data survives restart and how it is stored.
5	Audio transcription	Whisper dependency was installed and import verified.	Partial / verify	Only if end-to-end path works	Successful import does not prove the upload-to-transcript workflow.
6	Video analysis, timelines and multimodal fusion	Supporting directories/dependencies exist, but complete end-to-end behavior is not established by the available evidence.	Pending / partial	Not until tested	Demonstrate only implemented steps; label roadmap items clearly.

Feature Implementation Summary

Metric	Value / guidance
Total features listed	6
Fully implemented	Do not calculate until each status is verified in the current checkout.
Demonstrated	Count only features actually shown successfully during the demo.
Overall implementation rate	Implemented features ÷ total proposed features × 100. State whether partial features are excluded.

Before submission: update status and demo columns based on a real test run. This draft does not invent a completion percentage.
